Productivity

The NuSource Sporty IIO Back Pack Vacuum is a powerful and lightweight back pack vacuum designed with the operator in mind. The harness system keeps the vacuum tank off the operator's back reducing the heat and vibration caused by the vacuum motor. A large disposable vacuum bag and easy opening lid along with a large built in carrying handle and convenient on/off switch makes the Sporty one of the most user friendly machines available. The Sporty's standard quad filtration system offers four stage filtration with a cloth bag, disposable paper bag, pre motor filter and a post motor filter.

Versatile

The Sporty IIO can clean everything from furniture to dirty ceiling vents, hard floors and carpeting. This lightweight back pack vacuum makes it easy to get in and out of tight or confined spaces quickly and easily. The ergonomically designed back support and harness with flexible shoulder straps and waist harness assures a perfect fit for the operator and is so quiet (71 dB) it can be used in a library or nursing facility. An optional HEPA rated filter is also available. Today's team cleaning concept realizes that a back pack vacuum is essential and the Sporty back pack is the ultimate "team cleaning" tool. Try one on today and see if it fits!
